

Covid-19 survey in Gaza and Lebanon

CO|II|VOICES

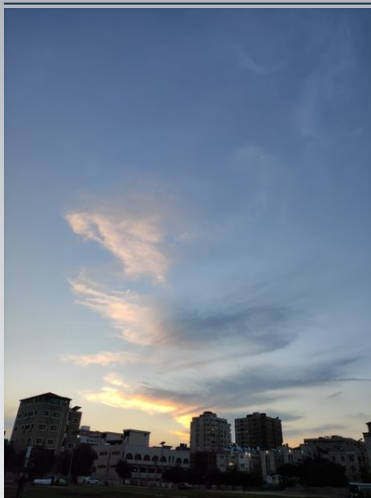

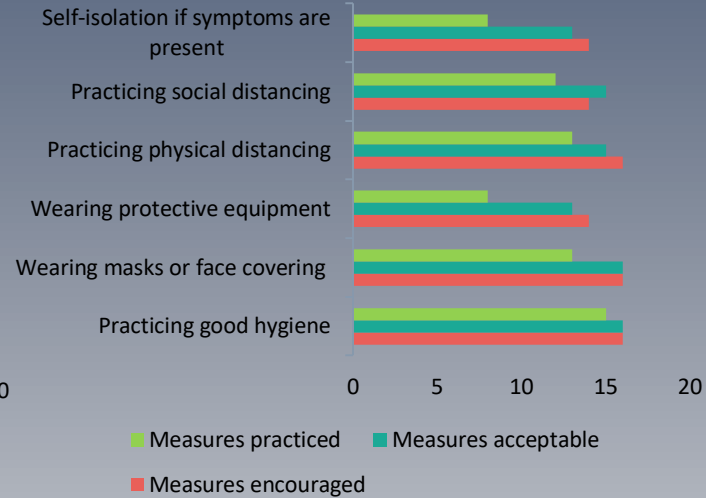

April 2021

A survey was conducted with Health and Relief and Social Support workers in two of Gaza and Lebanon's most populated camps. The below data is for the period 16/02/21-31/03/21.

Trend of Covid-19 protective measures amongst community members (15 respondents)

Trend of Covid-19 protective measures amongst UNRWA staff (16 respondents)

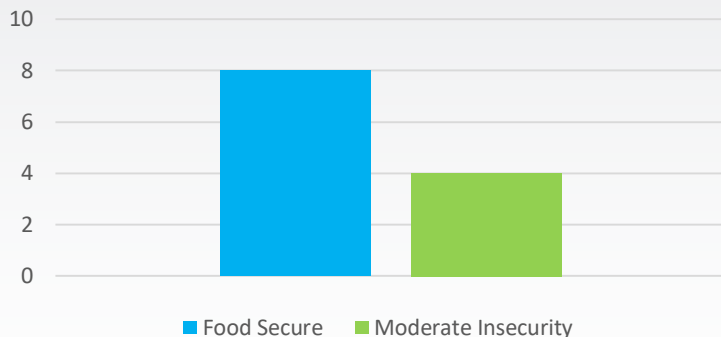

When asked about how to maintain wellbeing, one participant uploaded this picture and said the following:

“I try everyday to make use of a small window whereby I expose myself to sunlight in order to get some Vitamin D during the morning, some fresh air in the early afternoon and I wouldn't miss the beautiful sunset everyday”.

The WHO-5 Wellbeing Index measures mental wellbeing in relation to the past two weeks. A score below 13 indicates poor wellbeing and warrants further investigation for depression. **9 out of 14 UNRWA staff from Gaza and 2 out of 2 UNRWA staff from Lebanon have poor wellbeing.**

Among community members in Gaza, 14 out of 16 respondents have poor wellbeing

Frequency of Food Security status amongst UNRWA Staff in Gaza (12 respondents)

Frequency of Food Security Status amongst Community Members in Gaza (17 respondents)
